### Peladow® Calcium Chloride Ice Melters

Unlike rock salt & potassium chloride, Peladow® calcium chloride readily attracts moisture from the atmosphere, allowing it to form a liquid brine very quickly and fan out beneath the ice, breaking its bond with the pavement. Other deicers lose their effectiveness quickly when they become diluted with water. But even when diluted to 20% concentration, Peladow® keeps working down to -4 degrees F. Penetrates & undercuts ice fast & keeps on working all the way down to -25 degrees F - long after other deicers have given up. Easier on concrete & vegetation. Doesn't leave powdery residue.

### Degrade-Away™ Linear Low Green Tint Liners

The Oxo-Degradable additive breaks down the long hydro-carbon bonds of the plastic reducing the film strength and eventually providing a nutrient source for microbes. These microbes eat the broken down molecules reducing what was once plastic to water carbon dioxide and reusable biomass. This process requires oxygen and can occur at the top layers of a landfill or in the presence of sunlight heat or stress. Depending on conditions, this process can take between 2 months and 5 years. 100% degradable. Meets ASTM D6954-04 for degradable plastic.
